

Inventory Control:

Companies don't plan to fail ~ they fail to plan

Effective inventory control processes

What stock do we have? Exactly where is it? Do we have as much as we should have? Is it getting from the warehouse to the customer? Is it on time, undamaged and dry when it gets there? Are we getting proof of delivery each time?

Effective inventory control gives you the power to answer all of these questions. Then, and only then, will you be able to develop your **inventory management** systems to ensure that you have exactly the right stock, immediately before you need it (and not a moment sooner).

As you'd expect after 10 years in the supply chain business, Supply Today's logistics consultants are highly experienced in inventory control processes. We can develop and implement an inventory control process that is tailored to the specific needs of your organisation, encompassing:

- all stock types
- your unique reasons for holding inventory
- your cost of holding inventory
- ABC analysis of inventory & item management
- inventory management controls
- periodic review systems
- JIT – a different approach to reordering
- how much to order
- when to order
- safety, cycle, pipeline and excess inventory
- inventory counting methods
- End of Year
- rationalising products
- reducing excess
- Key Performance Indicators (KPIs)
